SUPPLEMENTAL COVERAGE OPTION (SCO)

The Supplemental Coverage Option (SCO) is a county-level revenue-based or yield-based optional endorsement that covers a portion of losses not covered by the same crops underlying crop insurance policy.

It can be elected only when a producer has purchased one of the following underlying plans of insurance:

- Yield Protection;
- Revenue Protection;
- Revenue Protection with the Harvest Price Exclusion.

It is available in select counties for spring barley, corn, soybeans, wheat, sorghum, cotton, and rice.

IS SCO RIGHT FOR YOU?

When considering SCO, you must first consider whether to elect to participate in the new FSA Agriculture Risk Coverage (ARC) program. Crops for which ARC is elected are not eligible for the SCO endorsement. For those crops and farms eligible for SCO, the type and amount of SCO coverage are determined by the type and coverage level you choose for the underlying policy. You should talk to your crop insurance agent to determine what best meets your individual risk management needs.

Why Farmers Mutual Hail?

Farmers Mutual Hail provides top-level farm insurance products backed by the service you deserve. Our knowledgeable, full-service agents will help you make informed decisions tailored to fit your farming operation needs. FMH maintains an exceptionally well-trained and knowledgeable adjusting staff to provide policyholders with the most accurate and responsive claims service in the industry. Trust in the company that has been protecting America’s farmers since 1893. Trust in Farmers Mutual Hail.
HOW SCO WORKS
SCO follows the coverage of your underlying policy. If you choose Yield Protection, then SCO covers yield loss. If you choose Revenue Protection, then SCO covers revenue loss.

The amount of SCO coverage depends on the liability, coverage level, and approved yield for your underlying policy. SCO pays a loss on an area basis, and an indemnity is triggered when there is a county level loss in yield or revenue.

SCO payments are determined only by county average revenue or yield, and are not affected by whether you receive a payment from your underlying policy. So it is possible for you to experience an individual loss but not receive an SCO payment, or vice-versa.

PURCHASING SCO
First, you must choose an underlying policy:
• Yield Protection;
• Revenue Protection; or
• Revenue Protection with the Harvest Price Exclusion.

Next, you choose SCO as an endorsement to the underlying policy. You must make this choice by the sales closing date for your underlying policy, and with the same insurance company.

Any crop on a farm that you elect to participate in the Agriculture Risk Coverage (ARC) program is not eligible for SCO coverage.

The Federal Government pays 65 percent of the premium. The exact premium cost depends on the crop, county, coverage level you choose, and the type of coverage you choose, such as Yield Protection or Revenue Protection.

SCO is a continuous option – it must be cancelled by the cancellation date. All applicable CCP, Crop, and SP provision/dates from the underlying policy will apply to SCO.

SCO does not provide coverage for Prevented Planting or Replanting.

There is an additional administrative fee per crop/county for adding SCO.

SCO Revenue Example Calculation

<table>
<thead>
<tr>
<th>Crop: Corn</th>
<th>Projected Price: $4.02/bu</th>
</tr>
</thead>
<tbody>
<tr>
<td>APH: 190 bu/ac</td>
<td>Coverage Level: 75%</td>
</tr>
</tbody>
</table>

Determine the Expected Crop Value:

190 bu/ac x $4.02/bu = $763.80/ac. Expected Crop Value

Determine value and coverage:

$763.80 x 75% = $572.85 Covered by Underlying Policy

AVAILABILITY
SCO must be elected by crop. It is available in select counties for the following crops:
• Spring Barley
• Corn
• Soybeans
• Wheat
• Sorghum
• Cotton
• Rice

The choice of counties selected for 2015 is based on the availability of county yield data from USDA’s National Agricultural Statistics Service (NASS), subject to the following criteria:
• NASS county yield estimates are available for at least 20 of the last 30 years.
• NASS county yield estimates are available for at least 8 of the last 10 years, with an average of at least 10,000 planted acres over those years.
• There are at least 50 or more farming entities for the crop in the county according to the most recent Census of Agriculture.

Will SCO Be Available for More Crops?
RMA will expand the program to more crops and counties as the program continues. RMA will be making greater use of crop insurance data to expand SCO coverage into more areas, more crops, and to make SCO coverage more practice-specific.
